

Participant Simulation Scenario Handout: Suspect, Positive, and Palliative COVID-19 Resident Case

Welcome and thank you for joining this simulation session. The graphic below outlines the process we will follow during our time together. There are three different parts to the simulation sessions, each with its own objectives. We invite you to attend all three parts. We hope that you find this practice informative. At the end of the session, please complete the corresponding evaluation. We value your feedback.

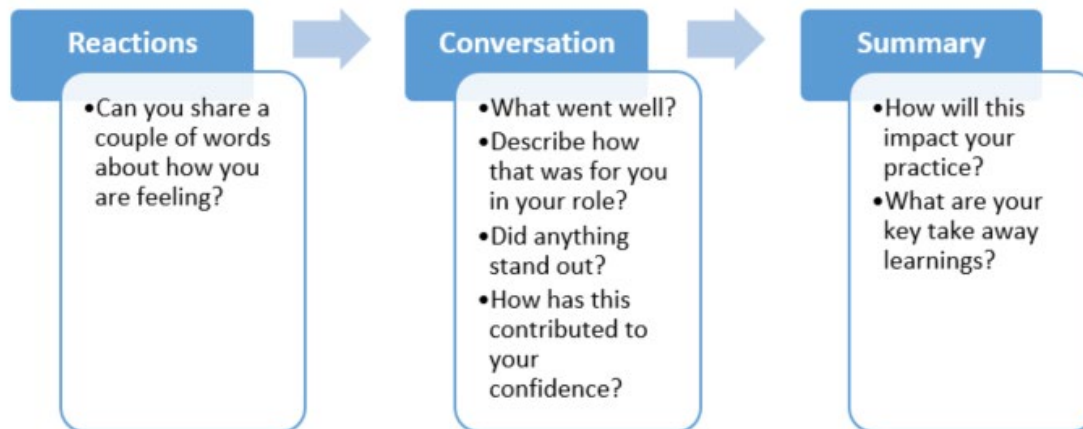

The following objectives are included in all three parts:

1. Practicing meticulous hand hygiene.
2. Practice donning and doffing PPE, including use of an observer.

Suspect, Positive, and Palliative COVID-19 Resident Case	
Resources	COVID-19 LTCF Response Protocol
Part 1 Goal: To enhance the nursing coordinated clinical response to a resident experiencing COVID-19 symptom.	
Objectives	1. Identify and respond to a resident’s symptoms of COVID-19.
Scenario	11:00 on the day the resident’s symptoms are identified. An HCA is walking with a resident with mild cognitive impairment (CPS=2/6) in the hallway near the resident room. The resident has a new onset of an occasional cough and sore throat. Vital signs are within normal ranges. <i>Critical thinking: The resident is exhibiting symptoms of COVID-19.</i>
Part 2 Goal: To enhance the nursing coordinated clinical response to a COVID-19 positive case.	
Objectives	1. Practice caring for a COVID-19 positive case for transfer to a cohort unit.
Scenario	10:00 next day after the onset of COVID-19 symptoms. The resident’s status remains stable. Continued coughing and a “sore throat.” Vital signs are within normal ranges. The NP result is positive. The care team prepares the resident for transfer to a cohort unit.
Part 3 Goal: To enhance the nursing coordinated clinical response to a COVID-19 LTC deceased resident and transport to a funeral home.	
Objectives	1. Practice caring for a COVID-19 palliative care resident.
Scenario	09:00 Resident temperature increased to 38° C, SaO2-85%, short of breath, respirations =6/min and not easily aroused. <i>Critical thinking: Resident condition palliative.</i> Scenario continues: 21:00 Resident is deceased and transport to the funeral home is to be arranged.

Participant Simulation Scenario Handout: Suspect, Positive, and Palliative COVID-19 Resident Case

Following the simulation re-enactments, you will participate in a debriefing session. The graphic below outlines the process that will be followed for these sessions.
